

Benefits from the U.S.-Korea Trade Agreement

Nevada

December 2010

The U.S.-Korea Trade Agreement (KORUS) Will Help Grow the U.S. Economy & Support U.S. Jobs

The impact of the eliminations of tariffs and related barriers is estimated to increase U.S. GDP by nearly \$12 billion and U.S. goods exports by nearly \$11 billion annually. Adding to this would be new exports of U.S. services, where U.S. firms exported \$12.6 billion to Korea in 2009. Together, these export opportunities support the President's National Export Initiative goal of doubling exports by 2015.

KORUS is Essential to Ensuring U.S. Competitiveness in Korea and Throughout Asia

Ten years ago, the United States was the top exporter to Korea providing one-fifth of all Korean imports; now we are in third place with less than 10% market share.

- U.S. exporters to Korea currently pay an average 6.2 percent tariff, or nearly \$1.3 billion a year, to Korea through tariffs on industrial goods.
- Korean exporters to the United States currently face an average 2.8 percent tariff.
- On the first day of the European Union (EU) - Korea FTA, 85% of Korean tariffs on EU products will go to zero.
- Chinese products in Korea benefit from lower transportation and labor costs.

Implementing KORUS can help U.S. businesses and their workers stem this downward slide by making U.S. products more competitive in the Korean market.

- Tariff elimination for over 95 percent of U.S. exports of consumer and industrial products within five years.
- Tariff elimination for nearly two-thirds of U.S. agricultural exports immediately on entry into force.
- Significant new market access for U.S. service suppliers.
- Extensive elimination of non-tariff barriers, including in the autos sector.
- Tariff eliminations and strong transparency obligations will facilitate SME exports.

Nevada Depends on World Markets

Nevada's export shipments of merchandise in 2009 totaled \$5.7 billion. Nevada's exports to the world from 2005 to 2009 increased 44 percent, the tenth largest percentage gain among the 50 states. By comparison, total U.S. merchandise exports increased 17 percent over this period.

- Exports of manufactured goods support an estimated 18,000 jobs in Nevada. (2008 data are the latest available.)
- Nearly one-seventh (13.9 percent) of all manufacturing workers in Nevada depend on exports for their jobs.
- A total of 2,449 companies exported goods from Nevada locations in 2008.
- 2,133 of Nevada exporting firms were small and medium-sized enterprises (SMEs), with fewer than 500 employees.
- SMEs generated 24 percent of Nevada's total exports of merchandise in 2008.

Trade Works for Nevada

Recently implemented trade agreements have benefited Nevada. For example, in the first six years (2004-2009) of the U.S.-Singapore trade agreement, Nevada's exports to Singapore increased 156 percent. Since the U.S.-Australia trade agreement entry into force in 2005, Nevada's exports to Australia have grown by 51 percent. KORUS can similarly benefit Nevada.

The KORUS Opens New Markets for Key Nevada Exports

Machinery Manufactures – Machinery manufactures exports from Nevada to Korea averaged \$19 million per year between 2007 and 2009. Many machinery manufactures will receive duty-free treatment immediately upon entry into force of the agreement, including products such as refrigeration compressors, valves, renewable energy equipment, air pollution control equipment (pumps), water filtering and purifying equipment, and piston engines and engine parts. One hundred percent of agricultural and construction equipment, including tractors, lawn mowers, straw balers, conveyors, loaders, bulldozers, mechanical shovels, boring and sinking machinery, derricks, and dumpers, will continue to receive duty-free treatment. The elimination of Korean tariffs on U.S. machinery manufactures will provide a competitive boost to U.S. exporters, who will no longer face tariffs as high as 13 percent.

Computers and Electronics Products – Computers and electronics products accounted for \$13 million per year of Nevada's merchandise exports to Korea between 2007 and 2009. Top U.S. exports in this sector included digital integrated circuitry, semiconductors, semiconductor manufacturing equipment, telecommunications equipment, radio and television parts, static converters, and magnetic tape. Korean tariffs range between zero and 13 percent. KORUS improves market access for computers and electronics products. With the immediate removal of many of these tariffs, U.S. exports will become much more competitive and affordable to Koreans.

Primary Metals Manufactures – One of Nevada's key manufactured export categories is primary metals manufactures, which accounted for an average of \$1.9 million per year to Korea from 2007 to 2009. U.S. exporters to Korea will be more competitive as tariffs on over 90 percent of primary metals manufactures will be eliminated immediately upon entry into force of the Agreement, including ferrous metals, aluminum, zinc, steel, lead and copper ores, and titanium. All remaining tariffs will be phased out within five years. Major infrastructure projects and private sector-led development should continue to provide opportunities for U.S. exporters in this sector.

KORUS Creates Opportunities for Nevada's Agriculture

Nevada's agricultural exports to all countries, estimated at \$102 million in 2009, supported roughly 820 jobs, on and off the farm. These export sales make an important contribution to the Nevada farm economy, which had total cash receipts of \$533 million in 2009. KORUS eliminates tariffs and other barriers on most agricultural products, increasing export opportunities for U.S. agricultural products like those produced in Nevada such as beef, dairy, and vegetables. With immediate elimination of duties on nearly two-thirds of U.S. agricultural exports to Korea, KORUS gives U.S. exporters improved access to the Korean market for many of the products that have been highly protected.

For more information on agricultural exports and KORUS, see the fact sheets posted by the U.S. Department of Agriculture at: <http://www.fas.usda.gov/itp/us-koreata.asp>

All state export data in this report are based on the Origin of Movement (OM) series. This series allocates exports to state based on transportation origin, i.e., the state from which goods began their journey to the port (or other point) of exit from the United States. The transportation origin of exports is not always the same as the location where the goods were produced. Thus conclusions about "export production" in a state should not be made solely on the basis of the OM state export figures.
